

## ADDITIONAL HEALTH INFORMATION

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

(A) **Microbial contaminants**, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.

(B) **Inorganic contaminants**, such as salts and metals, which can be naturally occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.

(C) **Pesticides and herbicides**, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.

(D) **Organic chemical contaminants**, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems.

(E) **Radioactive contaminants**, which can be naturally occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. The Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

## FOR CUSTOMERS WITH SPECIAL HEALTH CONCERNS

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbiological contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

## HOW TO REACH US

If you have any questions about this report or concerning your water utility, please contact Cathy Cabezas, City of Fellsmere at (772) 571-0127. The City of Fellsmere's office is open from 8:30 AM until noon and 1:00 PM until 5:00 PM, Monday through Friday. We want our valued customers to be informed about their water utility.

## CITY OF FELLSMERE

### 2003 ANNUAL DRINKING WATER QUALITY REPORT

*Este informe contiene información muy importante sobre su agua beber. Tradúscalo ó hable con un amigo quien lo entienda bien.*

We're pleased to present to you this year's Annual Drinking Water Quality Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. If you have any questions or concerns about the information provided in this report, please feel free to call any of the numbers listed.

## WHERE YOUR WATER COMES FROM

The water source for the City of Fellsmere is ground water which is withdrawn from four wells in the Floridan Aquifer. The water is disinfected to destroy microbes prior to delivery to customers.

## HOW WE ENSURE YOUR DRINKING WATER IS SAFE

The City of Fellsmere routinely monitors for contaminants in your drinking water according to Federal and State laws, rules, and regulations. Except where indicated otherwise, this report is based on the results of our monitoring for the period of January 1 to December 31, 2003. The state allows us to monitor for some contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of our data are more than one year old but are based on the most recent water analyses performed.

## 2003 WATER QUALITY SUMMARY TABLE - PWS ID NUMBER 3314280

Contaminant and Unit of Measurement	Dates of sampling (mo/yr)	MCL/AL Violation Y/N	Level Detected <sup>A</sup>	Range of Results	MCLG	MCL	Likely Source of Contamination
<b>Radiological Contaminants</b>							
Alpha Emitters (pCi/l)	10/2003	N	1.4	N/A	0	15	Erosion of natural deposits
<b>Inorganic Contaminants</b>							
Barium (ppm)	10/2003	N	0.008	N/A	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
Chromium (ppb)	10/2003	N	30	N/A	100	100	Discharge from steel and pulp mills; erosion of natural deposits
Selenium (ppb)	10/2003	N	5	N/A	50	50	Discharge from petroleum and metal refineries; erosion of natural deposits; discharge from mines
Nickel (ppb)	10/2003	N	3	N/A	N/A	100	Pollution from mining and refining operations; natural occurrence in soil
Sodium (ppm)	10/2003	N	20.9	N/A	N/A	160	Salt water intrusion, leaching from soil
<b>Lead and Copper (Tap Water)</b>							
Copper (tap water) (ppm)	2003	N	0.241 (90 <sup>th</sup> percentile)	0 samples>AL	1.3	AL = 1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
Lead (tap water) (ppb)	2003	N	5 (90 <sup>th</sup> percentile)	0 samples>AL	0	AL = 15	Corrosion of household plumbing systems, erosion of natural deposits

### TABLE EXPLANATION AND DEFINITIONS:

The water quality summary table above shows the results of our most recent water quality analyses. The terms used in the water quality summary table and in other parts of this report are defined below.

ppm – parts per million or milligrams per liter is one part by weight of analyte to one million parts by weight of the water sample.

ppb – parts per billion or micrograms per liter is one part by weight of analyte to one billion parts by weight of the water sample.

pCi/l – picocuries per liter is a measure of the radioactivity in water

Action level (AL) – the concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Maximum contaminant level or MCL – the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum contaminant level goal or MCLG – the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

N/A – not applicable

### TABLE NOTES:

- A. Results in the level detected column for radiological and inorganic contaminants are the highest average at any of the sampling points or the highest detected level at any sampling point, depending on the sampling frequency.
